PROFILE

I am a passionate Frontend Developer with 6 months of hands-on experience in building dynamic websites and applications. Specializing in HTML, CSS, JavaScript, and React.js, I have a solid understanding of responsive design using Media Queries, Bootstrap, and Tailwind CSS. My experience extends to full-stack development, where I have contributed to both frontend and backend tasks, creating complete web applications.
In one of my projects, I had the opportunity to lead a development team, collaborating effectively to ensure successful project delivery. I am eager to continue learning and growing in web development, with a strong foundation in both design and functionality. My goal is to create user-friendly, visually appealing websites that bring ideas to life, ensuring both seamless functionality and an exceptional user experience.
